

207120 **'Badger Barrier'** Battery /Mains Powered Setup Instructions

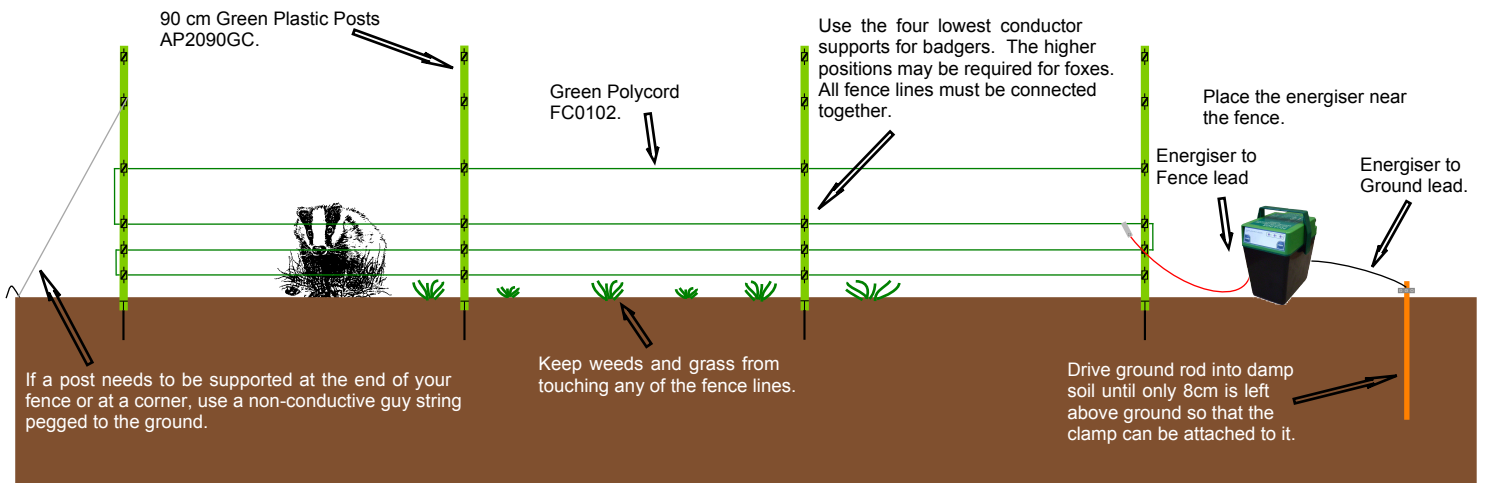

Your Badger Barrier kit includes the following items:

- 20x green plastic posts
- 250m of green polycord
- 1x PR05 Battery/Mains Powered Fence Energiser
- 1x Energiser to fence lead
- 1x Energiser to ground lead
- 1x Grounding rod & clamp
- 1x Warning sign
- 4x Wooden Corner Posts
- 1x Fence Tester

For instruction purposes posts are shown closer together than is necessary. In practice posts can be placed 2 or 3 metres apart.

1. Position your fence energiser near your fence. Leave switched off until your fence is erected.
2. Drive the grounding rod into the ground until about 8cm is left exposed, then attach the clamp. Attach the stripped end of the black earth lead under the middle screw and the other end to the ground terminal (green) on the energiser.
3. Push the plastic posts into the ground 2 to 3 metres apart, closer if you have spare posts. At the ends and corners you may need to tie the posts to a secure object such as a wooden fence or guy string them to the ground.
4. Tie one end of the polycord to the lowest conductor support at the first post, continue the polycord through the next post's conductor support and so on until you reach the other end of the fence. At the final post bring the polycord up to the next conductor support and then back along to the beginning again. Repeat until you have four horizontal lines of polycord all made from one long piece and finally tie the end to the final support. Before completing the top line thread the polycord through the two holes in the warning sign so that it hangs in a clearly visible position.
5. Connect the red fence cable to the fence terminal (red) on the energiser and the other end to the fence polycord using the crocodile clip. Your fence is now ready to switch on.
6. If you are using mains voltage to power to your energiser then 5m ground rod and fence connection cables are provided enabling you to site it indoors up to 5m away.

Where corners in your net need extra strength use the wooden posts and string provided to simply tie a plastic post to a wooden one ensuring that the post or string does not touch any part of the conductor line.

For extra posts order part no. AP2090GC.
For extra polycord order part no. FC0102.
