

## 208200 Mains Powered

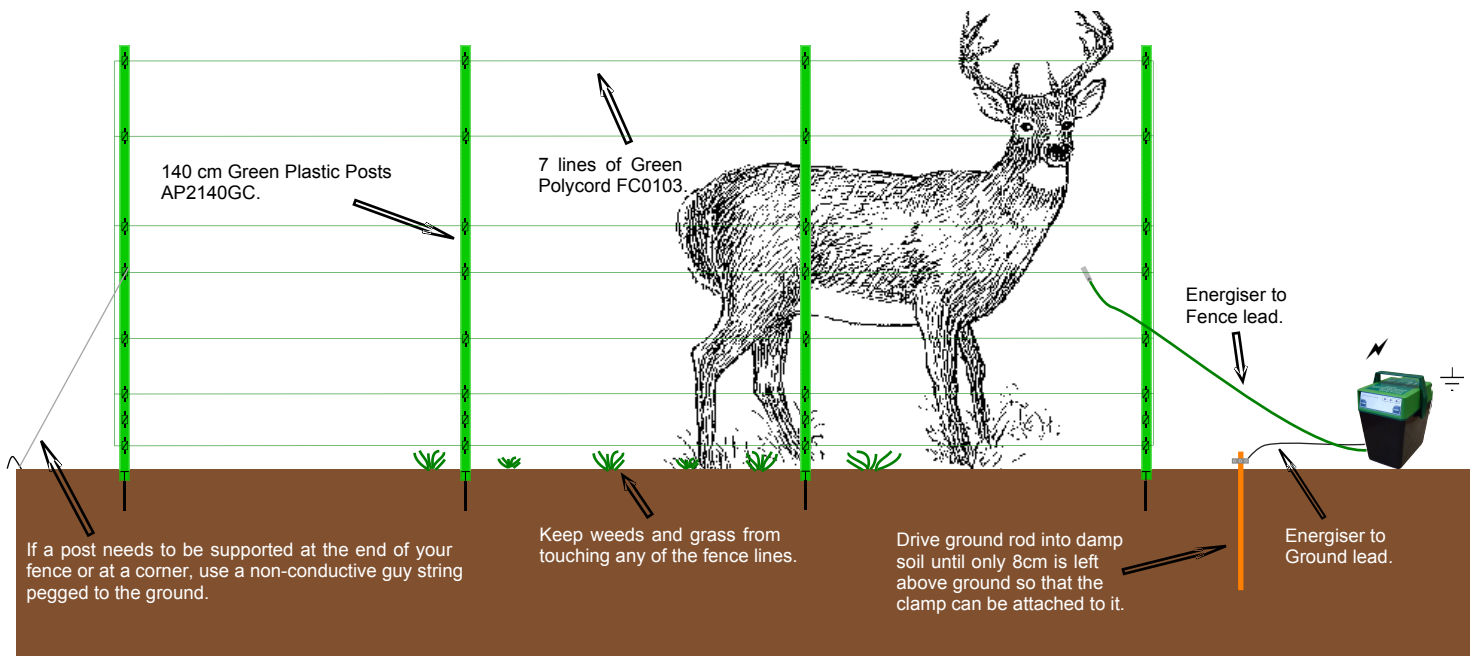

# 'Deer Fence Kit' Setup Instructions

Your Starter kit includes the following items:

- 20x green 140cm plastic posts.
- 750m of Green polycord.
- 1x PR05 Mains/Battery Powered Fence Energiser.
- 1x Energiser to fence lead.
- 1x Energiser to ground lead.
- 1x Grounding rod & clamp.
- 1x Warning sign

For instruction purposes posts are shown closer together than is necessary. In practice posts can be placed 3 to 5 metres apart.

1. Leave your fence energiser unplugged until your fence is erected.
2. Drive the grounding rod into the ground near to the energiser until about 8cm is left exposed. Attach one end of the ground lead (black or green) to the ground clamp using one of the side clamping screws and the other end to the ground terminal (green) on the energiser. Then attach the clamp to the exposed grounding rod.
3. Push the plastic posts into the ground 3 to 5 metres apart, closer if you have spare posts. At the start, end and corners you may need to tie the posts to a secure object such as a wooden post or guy-string them to the ground.
4. Take one end of the polycord and tie it to the top support on the first post.
5. Place the polycord in the corresponding supports on each of the posts of your fence. When you reach the other end of the fence bring the polycord down to the next support and return in the other direction back to the beginning of the fence. When you reach the first post again bring the polycord up to the top line and make a connection with that line and then bring the polycord down to the third support and repeat the whole process again, forming a grid rather than just a zig-zag. The polycord can be cut using scissors and joined using a simple reef knot. Finally tie the polycord to the bottom support of the final post.
6. Connect the 5m lead-out cable to the fence terminal (red) on the energiser and the other end to the polycord at the first post using the crocodile clip. Your energiser is now ready to plug in and switch on.

For extra posts order part no. AP2140GC.  
For extra polycord order part no. FC0103.
